Sequence 9109, Application US/09489039A

Sequence 9109, Application US/09489039A

Patent No. 6610836

GENERAL INFORMATION:
APPLICANT: Gary Breton et. al

TITLE OF INVENTION: NUCLEBIELIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA

TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 2709.2004001

CURRENT APPLICATION NUMBER: US/09/489,039A

CURRENT APPLICATION NUMBER: US 60/117,747

PRIOR FILING DATE: 1999-01-29

NUMBER OF SEQ ID NOS: 14342

SEQ ID NO 9109

LENGTH: 151

TYPE: PRI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                              Sequence 71, Application US/08485286

Sequence 71, Application US/08485286

Patent No. 5646026

TITLE OF INVENTION: TRESONE-INACTIVATING PROTEINS, INACTIVE

TITLE OF INVENTION: PRECURSOR-INACTIVATING PROCESS FOR MAKING A METHOD OF

TITLE OF INVENTION: USING

NUMBER OF SEQUENCES: 81

CORRESPONDENCE ADDRESS:

ADDRESSER: ANDREAT: BORUCKI

STREET: 9330 ZIONSVILLE ROAD

Sequence 3, Application US/10440796
GENERAL INFORMATION:
APPLICANT: VITETA, ELLEN S.
APPLICANT: GHETIE, VICTOR F.
APPLICANT: MALLSHAW, JOAN
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR AMELIORATING VASCULAR LEAK
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR AMELIORATING VASCULAR LEAK
TITLE OF INVENTION: SYNDROME (VLS)
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR AMELIORATING VASCULAR LEAK
CURRENT FALING DATE: 2003-05-19
PRIOR FILING DATE: 2000-03-30
PRIOR FILING DATE: 1999-03-30
PRIOR FILING DATE: 1999-03-30
PRIOR FILING DATE: 1999-03-30
NUMBER OF SEQ ID NOS: 19
SOFTWARE: PATENTIN OF: 2.1
SEQ ID NO 3
FRANCE PLANCE TO SEQ ID NOS: 19
APPLICANT: GHETIE, VICTOR F.
APPLICANT: SMALLSHAW, JOAN
APPLICANT: SMALLSHAW, JOAN
APPLICANT: BALLUAR, ROXANA G.
TITLE OF INVENTION: COMFOSITIONS AND METHODS FOR MODIFYING TOXIC EFFECTS OF
TITLE OF INVENTION: PROTEINACEOUS COMPOUNDS
FILE REFERENCE: US/10/282,935
CURRENT APPLICATION NUMBER: 08/528,873

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            dayiditatic (clone 7.2) precursor - Indian licorice (fragment)

N. Contains: rRNA N-glycosidase (EC 3.2.2.22)

C. Species: Abrus precatorius (Indian licorice)
C. Species: Abrus precatorius (Indian licorice)
C. Accession: C39761; S14471

"Cloning and expression of three abrin A-chains and their mutants
derived by site-specific of three abrin A-chains and their mutants
Bur. J. Blochem. 219:83-87 (1994).

-! CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one
specific adenosine on the 268 FRNA.

-! SIMILARITY: Belongs to the ribosome-inactivating protein family.

EMBL, X76720, CAA54138.1, -.

                                                                                Chih-Hung H., Lee M.C., Chen J.K., Lin J.Y.;
"Cloning and expression of three abrin A-chains and their mutants derived by site-specific mutagenesis in Escherichia coli.";
Eur. J. Biochem. 219:83-87/11294).
-!- CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28s rRNA.
-!- SIMILARITY: Belongs to the ribosome-inactivating protein family.
EMBL: SIMILARITY: Belongs to the ribosome-inactivating protein family.

Sequence 21750, Application US/09252991A

Patent No. 6551795

GENERAL IMPORMATION:

APPLICANT: Marc J. Rubenfield et al.

TILLS OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;

TILLS OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;

TILLS OF INVENTION: 107196.136

CURRENT PLING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,190

PRIOR SILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

LENGTH: 371
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               APPLICANT: Gary Breton et. al

Patent No. 6605709
GRNERAL INFORMATION:
APPLICANT: GRAY BRETON
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABII
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
TITLE REFERENCE: 2709-1002-001
CURRENT APPLICATION NUMBER: US/09/543,681A
PRIOR APPLICATION NUMBER: US 60/128,706
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
